

# DQN-based Preference learning

By: Hussein Elehwany | Supervisors: Prof. Ouf & Prof. Gunay

# Potential tasks

- Visualize the data: heating setpoint, cooling setpoint, room setpoint & indoor temperature
- Look up instances of irregular temperature changes (too hot or too cold)
- Verify of overrides are consistent with the plots (I will send the overrides file later)
- Filter the data to get rid of the irregular zero points

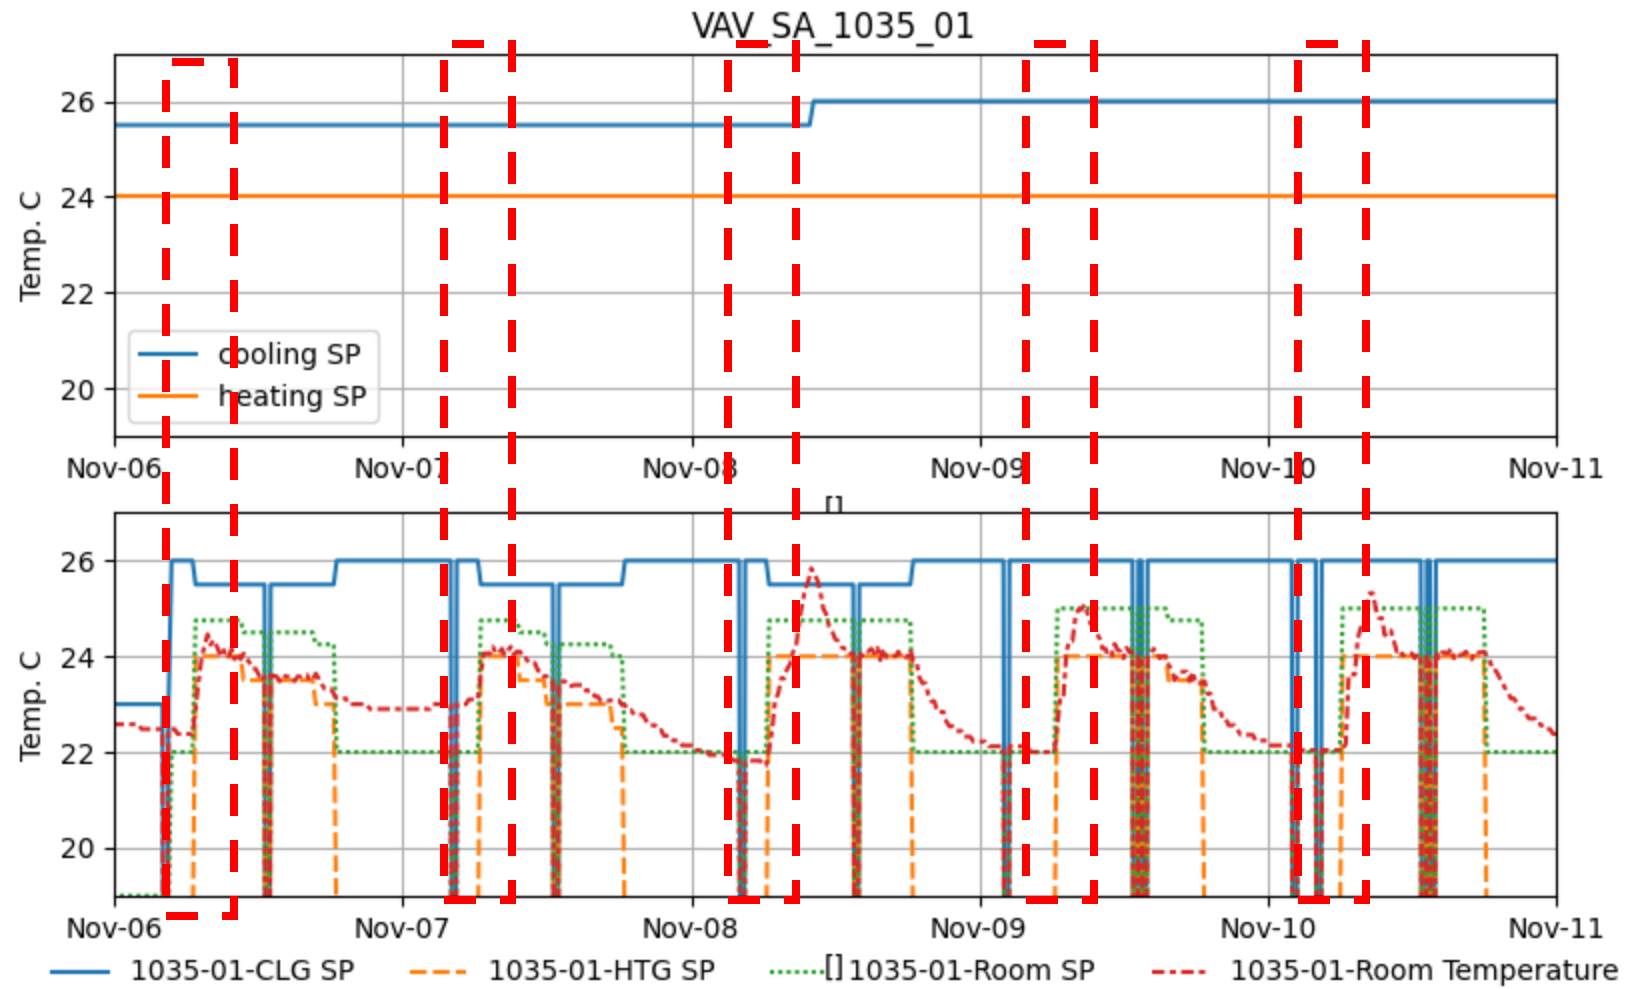

# 4 rooms

- 1035-00: multi-user space
- 1035-01: 2 users office
- 1035-02 : 2 users office
- 1032-00: meetings room

Room 1035-01

# 1035-01

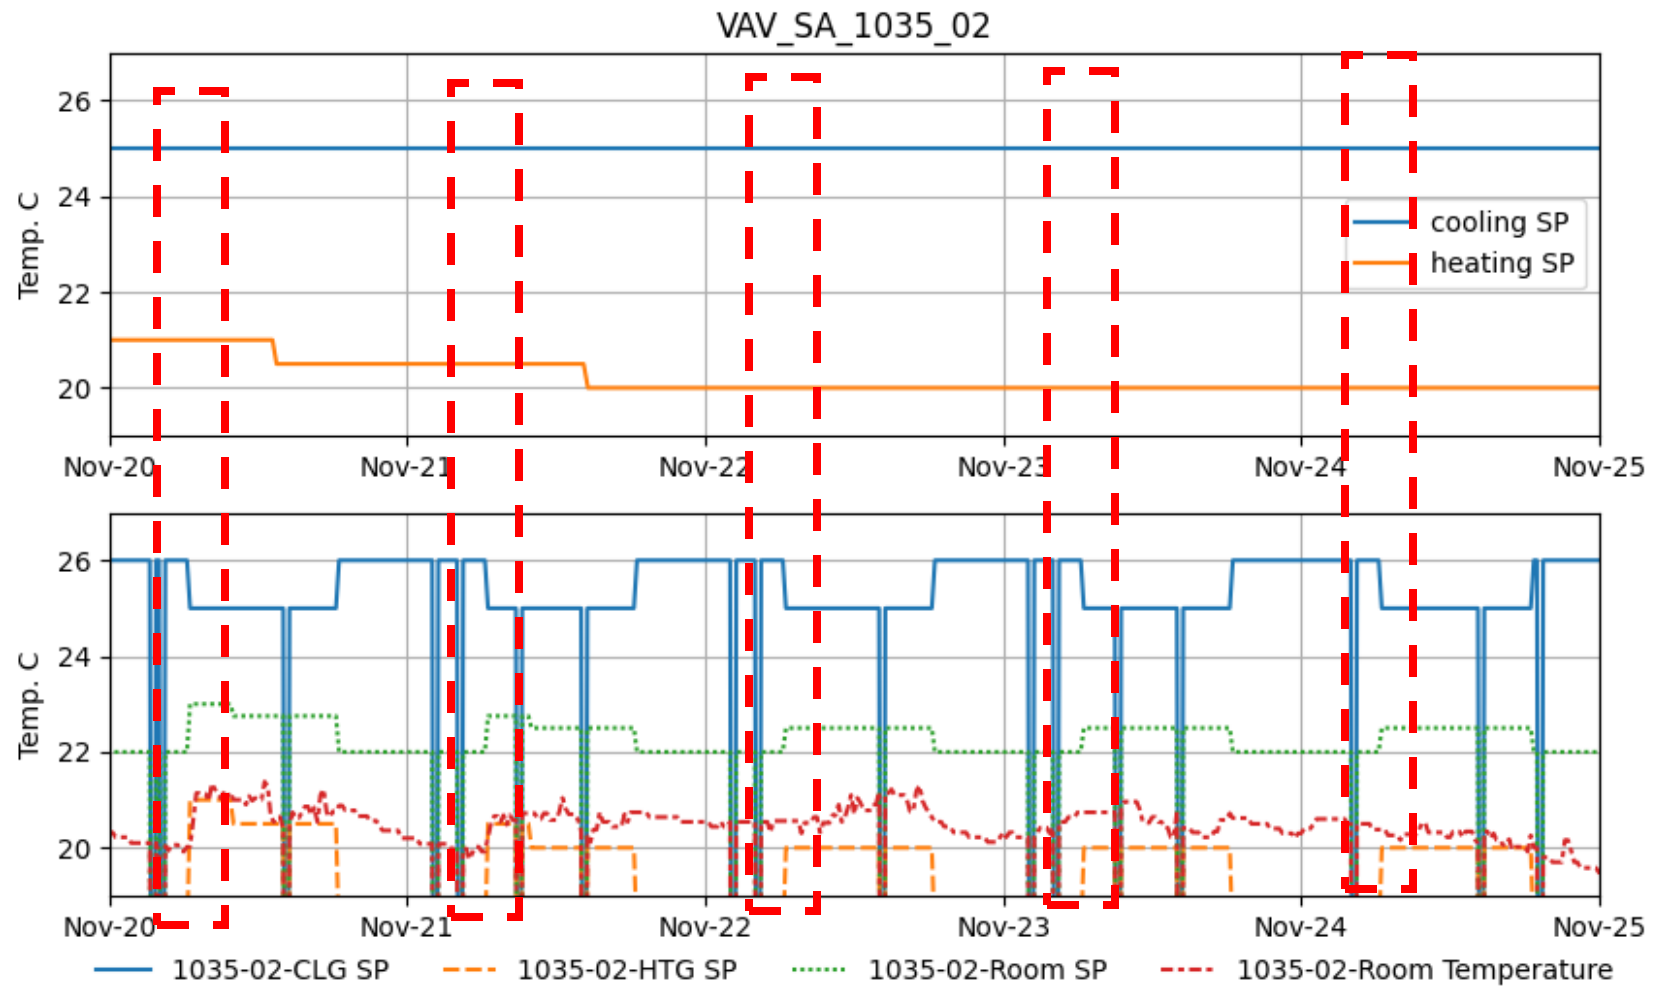

Room 1035-02

# Thank You
